36 AEI 100 Future Look. Flash forward. Uncovering the hidden value of vehicle telematics

FEATURES
19 Shifting gears smoothly. SAE
Richard E. Kleine, a 30-year veteran of Cummins Inc. and former SAE Commercial Vehicle VP, seeks continuity over change as he moves into the driver's seat of SAE International.

22 Top new engines. POWERTRAIN
AEI editors highlight the most significant internal-combustion powerplants of the new year and beyond.

22 Technology expands the Ecotec's reach
24 EcoBoost offensive shifts to four cylinders
26 2011 Pentastar is Chrysler's new do-it-all V6
28 Mazda readies Skyactiv engines

30 Riding on in-wheel motors. CHASIS
Researchers analyze passive concepts and new mechatronic suspension systems to ensure vehicle comfort and safety when using in-wheel motors with different torque requirements.

40     AEI 100 Future Look. From mind to motion. A novel approach.

FEATURES
24     Future testing of active safety systems. TESTING
     To speed up the introduction of active safety systems, efficient
     standardized test programs are needed, including alternatives to test-track
     testing.
28     Engine management on a budget. VEHICLE
     Tata Technologies engineers at the recent SAE Convergence event
     provided an inside look at how they developed the Nano's low-cost EMS
     and reduced development time and cost with extensive use of modern
     tools.
31     Racing for the green. MOTORSPORTS
     Changes are coming to Indy Car and Formula One to focus on green
     technology that applies to production vehicles.
34     Taking strides together. EVENTS
     SAE 2011 World Congress host company General Motors touts teamwork
     as a way to expand industry knowledge and encourage energy efficiency.

56 AEI 100 Future Look
An electric future? Perhaps, but what about now?

FEATURES
22 AEI Best Engineered Vehicle 2011-Chevrolet Volt. VEHICLES
General Motors' pioneering E-REV eliminates range-to-empty worries with a cleverly engineered powertrain that makes Volt the right EV at the right time-and AEI's Best Engineered Vehicle for 2011.
36 Government boost key to biofuel future. ENERGY
Biofuel companies are determined to become viable on their own but want continued government assistance it oil companies receive assistance, too.
40 More from less. POWERTRAIN|ELECTRONICS
Trimming fuel consumption and emissions requires higher voltages, greater computing power, and more memory.
43 Finding the right balance. PRODUCT MANAGEMENT
Engineers identify key technology trends such as the necessity for lighter, smaller engines and vehicles—and stress that managing trade-offs is an especially tough challenge.
47 Automotive Engineering International 2011 tech awards
The editors of Automotive Engineering International preview the most innovative supplier technologies to be displayed April 12-14 in Detroit at the SAE 2011 World Congress. The top five are highlighted on the following pages, but all 10, and other event coverage, can be viewed online at www.sae.org/mags/aei/saewc.

40 AEI 100 Future Look
Sensitive to electrostatic effects. The challenge for the next generation of 'computer on wheels' will be to develop the right protection.

FEATURES
24 Small car, big project
Vehicle Line Executive for the Fiat 500, Joe Grace, talks about bringing the iconic car to North America and the collaboration between engineers in Turin and Detroit that helped make it happen.
28 Girding the grid for EVs
Public electric utilities such as Detroit Edison have a vital role to play in cultivating the electric vehicle market.
30 Progress, new innovations spur GM's fuel-cell development
Fuel-cell program Executive Director Charlie Freese reveals the ongoing technical progress aimed at making FCVs part of GM's production vehicle portfolio later this decade.
32 Planning the future of PLM and 3-D virtual tools
The product-development revolution that began with CATIA is only beginning, says Dassault Systemes' CEO Bernard Charlés.
34 Next-gen steel bodies for alternative-powertrain vehicles
The objective of WorldAutoSteel's FutureSteelVehicle (FSV) program is to develop concepts of a radically different lightweight steel body structure for compact electrified vehicles and identify structure changes to accommodate larger vehicle variants.

64 AEI 100 Future Look. A new look at systems engineering. New platform approach manages increasing vehicle complexity

FEATURES
32 What drives Jaguar Land Rover
Group Engineering Director, Bob Joyce, reveals how his company's own- and the auto industry's-overarching strategic engineering and business priorities can be met now and in the future.
36 PSA puts weight behind hybrids
With their race and rally expertise, company leaders such as Christian Chehab, General Manager of Transmissions and Hybrid Projects, understand the importance of developing technologies to reach the environmental podium.
39 Lotus prepares to blossom again
As the company moves ahead with its five-year model plan, CEO Dany Bahar pledges quality, pragmatism, radical weight saving, and added DNA.
43 Multimaterial collaboration
Composites and aluminum are at the heart of Audi and Lamborghini's multimaterial approach to R&D, production.
47 Taking control of electrification
Control systems are key components not only for battery packs in electrified powertrains but also have a big role to play in power consumption throughout the vehicle.

40 AEI 100 Future Look. Strategic partnerships for growth
Engineers should work together to find faster, more reliable solutions.

FEATURES
22 Back to the future—the Honda way
In a far-ranging discussion, the company's President of R&D opens the curtains a little on the inner workings of research and development from the CVCC engine to the new two-motor hybrid system.

26 Mazda takes off 'Skyactiv-ward'
Senior Managing Executive Officer Hirotaka Kanazawa, who is in charge of R&D, discusses the Skyactiv package of technologies that he hopes will lift the company's eco prospects.

31 Chrysler pushes ICE limits with Multi-fuel, MultiAir R&D program. POWERTRAIN
Chrysler Powertrain engineers, in a collaborative research program with the U.S. Department of Energy, aim to squeeze a lot more efficiency out of the good old internal combustion engine.

36 No longer a blip on the screen. ELECTRONICS|SAFETY
Luxury vehicles have used radar for years, but now systems are poised to enter the mainstream as safety demands rise and costs come down.

48 AEI 100 Future Look. Celebrating 100 years
A brief look back at the turbulent past and challenging future.

FEATURES
20 2012 Verano vies for NVH benchmark
General Motors 'throws the toolbox' at its new entry-level Buick as it aims to create the quietest compact in the market.

24 Honda Civic
The 2012 Civic lineup adds a high-fuel-economy variant to go with the re-engineered sedan, coupe, Si, hybrid, and natural gas models, each of which boasts better fuel efficiency.

27 Ford charges up Focus EV for 2013
With major engineering support from Magna, Ford's first battery-electric passenger car promises Leaf-blowing features including half the charge time as that claimed by Nissan using a 240-V SAE J1772 Class 2 charge source.

32 Launch of 2012 Camry
It was the best of timing, it was the worst of timing
As the automotive industry still reels from economic and natural disasters, Toyota looks for blue skies ahead with the introduction of the seventh-generation Camry.

36 New Passat marks VW's return to U.S. production
The car is larger than its German-built predecessor but priced thousands of dollars less to match the C/D-class competition. The plant assembly line has 150,000 capacity, over 10 times the 2010 Passat sales volume.

40 Going for a smart grid. ENERGY|STANDARD
Many standards, technical advances will make it easier to recharge batteries in less time.

44 A better battery for stop-start. ENERGY
Axion makes a crystal-clear case for the superiority of its lead-carbon battery/capacitor hybrid product over lead-acid batteries.
